

Mermaid custom themes and fonts

This test exercises mermaid theming and font overrides applied per-diagram via the `%%{init}%%` directive, which mermaid parses at render time regardless of the `mermaid-filter` configuration.

Built-in theme: forest

Built-in theme: dark

Custom colors via base theme + themeVariables

Custom `themeVariables` only take effect with `theme: "base"`.

Custom font via `themeVariables.fontFamily`

The font must exist inside the container. The image ships `fonts-liberation`, so `Liberation Serif` resolves; the generic `monospace` family is also exercised.
